

Why ???

is the V2 Inox a better laser

The start of an accurate measurement is where the instrument makes contact with the spindle.

**Reliability is needed.** This is achieved by a SST base plate at 55HRC hardness (almost as hard as a ball bearing)

By design the magnet and the centre are recessed and contact only happens at the 4mm at either end 32mm apart (this eliminates rocking and achieves maximum accuracy)  
It is almost impossible to damage this key feature and anything softer and shorter is just not as good.

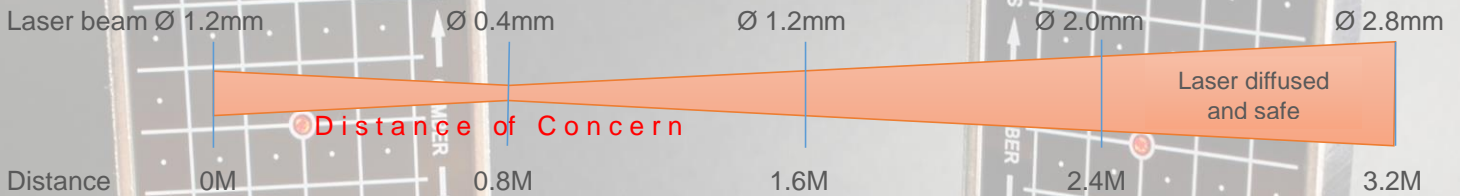

Remember an error of 0.1mm at contact = up to 3mm at opposite scale – if so, you are better off with old school alignment plates.

**Laser Warning: never look into a laser beam!**

Our laser diode is custom made for our application

**Safety – class 1** – weakest and safest laser on the market, therefore the hardest to see.  
We make up for this by specifying the focus length to 800 mm

Result - a smaller dot, better visibility and far more accuracy  $\varnothing$  0.4mm at measuring scale

Guaranteed accuracy of the Sniper V2 Inox is  $\pm 0.2$ mm (maximum error ever is the dot itself and that after many years of use). You can be assured that you are using the most accurate and by far the safest laser on the market **class 1**. Remember that class 3 will blind a human eye and burn your skin.

There are many more reasons why the Sniper V2 Inox is a winning instrument.  
Best explained – we are karters ourselves and only build and sell products that work.  
In other words we will not offer gadgets that don't work or are not needed.

**From Sniper you will get the safest, most accurate and by simplicity most reliable instrument ever.**

For more information or if you want any specific questions answered, please contact us through our website [www.sniperkart.eu](http://www.sniperkart.eu) or call Paul on +43 (0) 664 888 73830

The Sniper product range is now manufactured in Europe

**Sniper e.U.** Kurzgasse 4, A-7444 Unterloisdorf, Austria UID: ATU69425026

Sniper Americas – Distribution Partner Margay Racing [www.sniperamericas.com](http://www.sniperamericas.com)

Sniper Australasia – Distribution Partner St. George Kart Centre / Sydney, Australia [www.sgkarts.com](http://www.sgkarts.com)

Please make sure when buying a laser gauge you get a Sniper as the copycats like to use our name and too many customers get misled.
